## DETAILED ACTION

### *Response to Amendment*

1. Applicant's amendment filed April 11, 2008 is hereby acknowledged. Applicant's Response to the Restriction Requirement dated March 18, 2008 is hereby acknowledged.

Claims 1-4 and 6-17 are pending.

### *Election/Restrictions*

2. Claims 18-45 have been withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on April 11, 2008.

### *Claim Rejections - 35 USC § 102*

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 1-4 and 6-17 are rejected under 35 U.S.C. 102(b) as being anticipated by Ikegawa et al. (Separation and Detection of Bile Acid 24-Glucuronides in Human Urine by Liquid Chromatography Combined with Electrospray Ionization Mass Spectrometry,

July 1999, Vol. 15, pages 625-631, submitted in the IDS filed on August 6, 2004).

Ikegawa et al. teach a method of measuring the amount of an unlabeled organic acid in a sample of urine comprising adding to a sample suspected of containing the unlabeled organic acid to be measured an amount of a standard comprising one or more oxygen-18 labeled organic acids (p. 625) wherein at least one of the oxygen-18 labeled organic acids belongs to an organic acid class of oxo acids and wherein at least one of the oxygen-18 labeled organic acids is structurally similar or identical to the unlabeled organic acid to be measured (p.626); processing the sample (p.626); measuring the amount of unlabeled organic acid and oxygen-18 organic acid in the processed sample (p.626); using the amount of oxygen-18 organic acid measured in step c) to adjust the amount of unlabeled organic acid measured in the processed sample so as to reflect the amount of unlabeled organic acid originally present in the sample (p.626). The detection is accomplished by LC/ESI-MS. Three or more oxygen-18 labeled organic acids from oxo acids are added to the urine sample (Tables 1-3).
